DETAILED ACTION

Claims 1-56 are pending.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21 and 56, drawn to a cytochrome c oxidase, classified in class 435, subclass 189.
- II. Claims 22-50, drawn to a DNA encoding a cytochrome c oxidase, a vector containing it, a cell transformed with the same and a method of making a cytochrome c oxidase, classified in class 435, subclass 189.
- III. Claims 51-55, drawn to a process for producing 2-keto-L-gluconic acid (2-KGA), classified in class 435, subclass 143.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are patentably distinct because a polypeptide, a DNA and 2-KGA are different compounds each with its own chemical structure and function, and they have different utilities. The DNA molecules of invention II are not limited in use to the production of a polypeptide of invention I and can be used as hybridization probes and

Art Unit: 1652

a polypeptide of invention I can be obtained by a materially different method such as by the biochemical purification.

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant a recombinant cell of invention II can be used for the production of a cytochrome *c* oxidase of invention I as in a method of invention II and for the production of 2-KGA as in a method of invention III. 2-KGA can be obtained by a method of invention III and by chemical synthesis.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their divergent subject matter, fall into different statutory classes of invention, and are separately classified and searched, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Kevin Hooper on December 19, 2001 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 1652

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Specification

The holes at the top of all pages of the application make reading and entry of amendments difficult. New application pages having appropriate margins are required. See MPEP 608.01.
